The Model Portfolios

Six distinct strategies, from concentrated growth to steady income, each built for a specific role in a portfolio.

Every model is managed with a clear mandate and a defined level of risk, so you can see what each strategy is designed to do and who it may suit.

Holdings and weights reflect the latest target allocations. The lineup spans the full risk spectrum. Monarchs and Mighty Micros pursue growth through individual companies in the themes we believe will lead the market. Dividend All Star and Income Monsters focus on dependable cash flow. The two KISS models deliver the same discipline through a handful of low-cost ETFs. Subscribers receive every holding, every change as it happens and our monthly commentary on each model.

ABOUT THE RELATIVE RISK SCALE

The five-bar relative risk rating compares the models with one another, from Moderate to Highest. It is our judgment, not a guarantee, and even a Moderate model can lose value. A model rated High or Highest can fall sharply and may not suit investors with short time horizons or low risk tolerance.

ABOUT ALLOCATIONS AND CATEGORIES

Allocation percentages are target weights set by us. Actual weights drift as prices move. Sector and theme categories reflect our own classification and may differ from those used by index providers or other sources. Representative holdings are a selection, not the full list.
